Prison Management System

A modern jail and inmate management solution to efficiently manage prisoner identities and all aspects of correctional facility operations.

A highly customizable jail and inmate management solution for managing prisoner identities and automating correctional facility operations.

Collecting, organizing, and analyzing data at incarceration facilities using outdated systems is a considerable challenge. Moreover, antiquated jail management practices create inaccuracies and inconsistencies with inmate locations, booking and release dates, medical records, cell distribution, and more. Just imagine if the wrong inmate was released!

Our Prison Management System is an easily customizable jail and inmate management solution for Jail Authorities, Public Safety Departments, and Governments to manage prisoner identities and all aspects of facility operations. It includes robust workflows and digitization for courts and dockets, incarceration history, and time served. In addition, the solution seamlessly integrates with third-party systems, biometric capture devices, and biometric matching systems (ABIS).

Key Benefits

Improves Security

The solution has built-in security modules to track inmate activities, including scalable, multi-modal biometric matching (e.g., fingerprint, face & iris) – eliminating the chance of releasing the wrong inmate.

Requires Fewer Resources

The software is built using eGov - a no-code platform for creating customizable solutions that integrators can maintain, modify, integrate, and deploy using fewer resources.

Automates Operations

The solution digitizes prison management by eliminating paper-based forms and spreadsheets. It also automates processes and utilizes AI to detect patterns, trigger notifications, alert authorities, and much more.

Ensures Seamless Integration

Our Prison Management System is an end-to-end solution that users can integrate seamlessly with third-party systems, including any ABIS and biometric device for inmate identification.
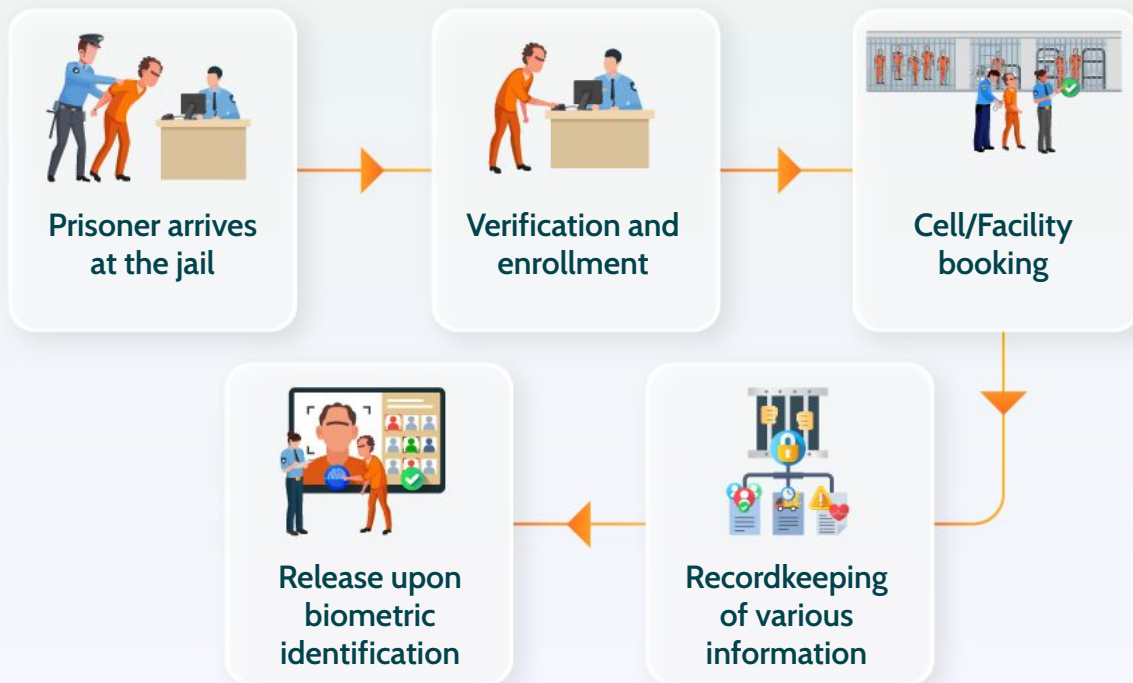

Enables Faster Deployments

The solution can be customized on the fly, saving hundreds of development hours, accelerating deployments, and eliminating neverending development cycles to meet crucial agency needs.

How it works

Prisoner arrives at the jail

Verification and enrollment

Cell/Facility booking

Release upon biometric identification

Recordkeeping of various information

After the convict is proven guilty, the Prison Management System helps choose the correctional facility where they will be kept. Upon arrival, the criminal is admitted, and their demographic, biometric, and case information is recorded within the system. Previously incarcerated inmates can be quickly and easily identified using biometrics. The solution stores information about the criminal's possessions during cell booking, medical screenings, inmate security classification, inmate correction activities, jobs/community work, and anything else required. It also houses visitor biometric and demographic information to verify authorized individuals that visit the prisoner and court hearing dates, transfers, and release dates.

Features of Prison Management System

Digital Prison Management
Manage data of operations, facilities, and inmates from a single solution.

Holistic Profiling
Create and manage detailed inmate profiles for robust analytics and reporting.

Customizable Workflows
Create customized workflows to automate processes for more efficient operations.

Case & Medical Records
Manage the activity trail of inmate cases, such as incidents, court appearances, and more.

Scalable Biometric Matching
Utilize multimodal biometric matching system for inmate and visitor identification.

Analytics & Reporting
Build detailed reports and custom analytics dashboards for real-time insights.

eGov Solutions

The M2SYS eGov platform offers a variety of configurable e-government solutions that can be seamlessly integrated by system integrators, biometric device manufacturers, and ABIS providers. Some popular solutions are:

M2SYS eGov Platform

- Public Education Solutions
- Military/Defense Solutions
- City/Municipality Digitization
- Government Administration Solutions
- Law Enforcement Solutions
- Citizen Service Solutions

Why you should choose M2SYS

M2SYS is a globally recognized digital transformation and citizen identification technology firm. Our eGov platform innovation enables us and our partners to rapidly deliver customized web and mobile solutions with seamless biometric integration.

- Founded in 2002;
- US Offices: Silicon Valley & Atlanta
- Research & development focused
- Thousands of clients globally
- Digital transformation expert
- Global team
