

M2SYS

Smart City e-Government App

Instantly transform your agency with modern web and mobile solutions that bridge the gap between government and citizens.

Let M2SYS power your digital transformation initiatives

Enhance the quality and efficiency of government services!

eGOV Solution

The **M2SYS** Smart City app is powered by a flexible platform that makes it easy to build customizable mobile (Android & iOS) and web application modules with no coding required. This modern e-government app ensures faster and more convenient communication from citizen to government (C2G), government to citizen (G2C), and government to business (G2B). **M2SYS** apps can also integrate with various central and local government information databases so data can be easily accessed and updated right from mobile devices.

Better Service Quality

A single platform that offers unlimited, customizable apps for government agencies to ensure high quality information services. With **M2SYS**, you can now offer more personalized service to citizens, businesses, entrepreneurs, and other government agencies in an effective and efficient manner.

Faster Service Delivery

Get access to the data you need when you need it and enable employees to serve more efficiently by responding right from their smartphones. **M2SYS** helps consolidate and integrate citizen, business, and property records from various systems into a single mobile app to save time and money while eliminating data silos!

Easier Access To Information

Administrative and operational employees across your government agency can easily access, edit or enter new citizen, enterprise, or property data and improve workflows from a mobile device. Keep everyone synchronized on the latest activity and eliminate manual data entry with the **M2SYS** platform.

"Anywhere-Anytime-Anybody" e-Governance service

With increased smartphone adoption and mobile network access, your team has an opportunity to stay constantly connected to its citizens. This is the perfect time for governments across the world to digitally transform and make e-governance services more accessible to its citizens. The only thing holding you back is a versatile platform that makes it easy to implement customizable web and mobile applications that consolidate and digitize your data. Luckily, that's exactly what **M2SYS** delivers!

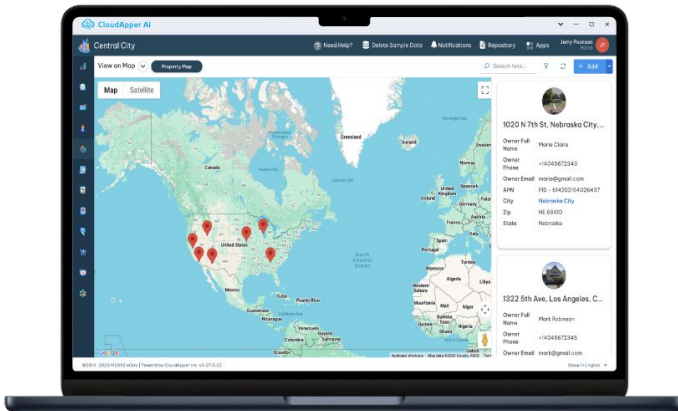

M2SYS e-Government applications are designed to personalize and improve the quality of public service to bridge the gap between government and citizens.

M2SYS has a rich portfolio of pre-developed applications and integration services. Government agencies can easily download, edit or even create new apps that integrate with third-party information systems, enabling government employees to easily access and act on data from their mobile devices.

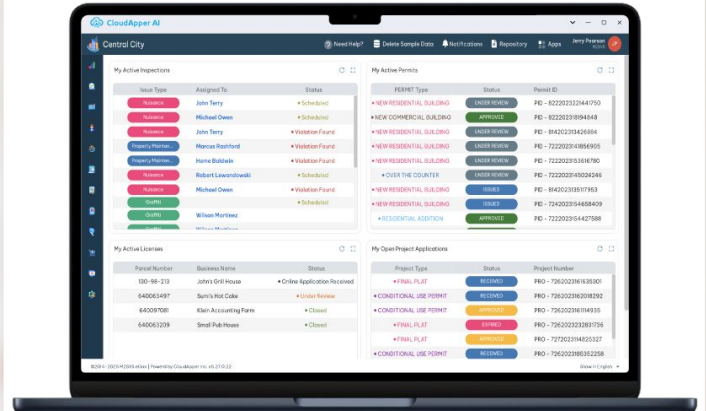

All apps within M2SYS can seamlessly share data between them!

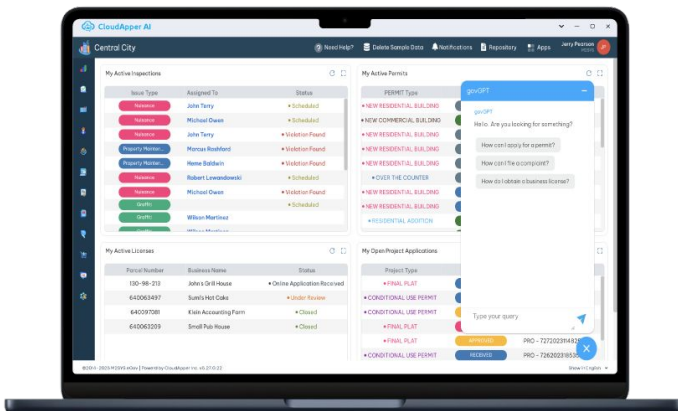

Key **M2SYS** Smart City App Modules

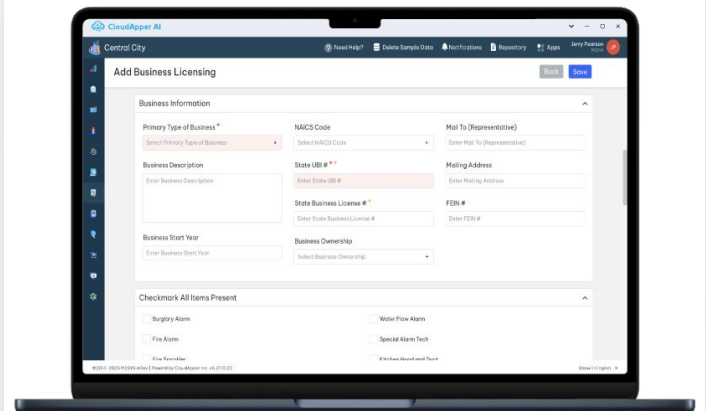

Helps government authorities in different cities and municipalities to manage property information, ownership, citation, and tax data.

Expedite the entire process of permit issuance with online application collection, reviews & inspection scheduling and fee collections.

Easily manage cases, record violations, and inspections tied to code requirements and regulatory compliance.

Capture online applications and digitize the process of issuing, calculating, and managing business and property licenses.

Simplify the management of assets and equipment, maintenance schedules, work order routing, and reporting to reduce downtime.

Track incidents, accidents, near misses, and observations with ease to establish a safer workplace and lower operational costs.

Four key ways that **M2SYS** empowers government agencies:

Improve Collaboration

Ensure that employees across the entire organization are kept in sync with instant access to centralized data from their phones.

Increase Efficiency

Reduce risks with standardized apps, automate government operations, and speed up tasks to improve efficiency and quality of public service.

Reduce Costs

Replace manual, paper-based systems with automated web & mobile apps to centralize data and reduce unnecessary overhead costs.

Increase Quality of Life

Improve and streamline government operational processes to increase the quality of public services.

About M2SYS

M2SYS is a globally recognized, woman and minority-owned company that focuses on innovative technology solutions. For the past 20 years, we have been helping enterprises and government agencies around the world with our software solutions & digital identity platform. Our flagship solutions include CloudABIS™, a highly scalable multi-biometric matching system (supports fingerprint, face, iris & vascular biometrics), and CloudApper™, a versatile platform that makes it easy and efficient to create customized, modern web and mobile applications without requiring any programming expertise.
